# NEW HERACLES AND SCOREBOARDS

Heracles no longer works on Internet, but on a local network that must be installed with all computers

Linked to the server by Ethernet cables through a switch (Wifi could be used too of course).

INSTALL HERACLES

1) Download the folder **Uniserver.zip** from the link provided by FILA.
   (http://www.fila-official.com/Uniserver.zip)

2) Extract the folder to local disk (C:) (**only on the computer that will be used as server**).

3) Right click on "Start.exe" and "Open". *IMPORTANT: Before starting the server you can check first if ports used by Uniserver are free (port 80), for that click on Run_pre_check.exe. Be careful, by default Skype is using the port 80, that could be a problem for Heracles*

   A pop up box will appear, followed by a blue icon with a white on the bottom menu bar (right-hand side)

4) Click on the icon (left click) and select "Start Uniserver (Apache MySQL)".

   Heracles opens to this address http://localhost/heracles_v2-5-1/administrator/

   Login and password are "admin" "admin"

SCOREBOARD AND DRAW SOFTWARE

Download the Scoreboard pack at this address:
http://www.fila-official.com/Scoreboards.zip
Read the "read me" text file.

LOCAL NETWORK

1) From the bottom network icon > Open the Network Centre
2) From the left menu > Modify the card parameters
3) Right click to Connection to local network > Properties
4) Select Internet Protocol version 4 (TCP/IPv4) > Properties
5) Set the IP address in agreement with the network technician (or use the example provided by FILA).
6) Disable the Windows FIREWALL protection on the Server
7) Ping to check the connection to the server: Type « cmd » in the Windows search bar and type: *ping(space)IP address(space)-t*

   Example: if server is 192.168.0.100 then write: ping 192.168.0.100 –t

How to use scoreboards and weight-in (draw)

First of all you have to setup every laptop.

1) Set the local time on all laptops (the time will be displayed between matches as screensaver).
2) Open fila_configuration.exe
   a. SQL server address: type in the sever address
   b. SQL User: heracles
   c. SQL Password: heracles
   d. BDD : heracles_ultimate

ADDITIONAL INFO FOR SCOREBOARDS

Choose the corresponding mat
If the application breaks down, the current match is backed up. If you do not need this match anymore, go to fila_configuration > Clear Backup Files.
Screen setup
Go to fila_configuration > Scoreboard position > Default (it will automatically use the correct screen width).
Second screen: Right click on desktop > Screen resolution > Display > Extended Desktop
Click on the second screen > Resolution = 1024x768

WEIGH-IN

Start fila_draw.exe
Choose the style and category > Start (wrestlers can be deleted, but not added).
Click first on choose a medal, then on the wrestler who chose the medal and click "Attribute to this wrestler"

If a competitor did not make weight or did not show up, he/she will be deleted from the list.
Close the application and re-open it for the next draw.

In case of manual draw, go to Heracles and open "Weigh-in > Manual Weigh-in" to enter the competitors' draw numbers.

SHARE HERACLES ON SEVERAL COMPUTERS

Link all computers to the local network. Use IP addresses that have the first 3 digit segments identical to the server. The last digit segment must be different on each computer to avoid address conflicts. Open Internet Explorer (the browser that works the best with Heracles) and type in:

http://localhost/heracles_v2-5-1/administrator/

Replace "localhost" by the server IP address.
